The AI-native academic operating system for Indian colleges

Vriddhi writes a college's question papers, runs the exam, grades it and manages fees, attendance and results — one role-based platform, six Indian languages, ₹449 per student per year.

48,246
colleges in India — 4.50 Cr students

7 + 160
role portals · backend functions

257K
lines of code · ~1,540 tests green

₹18,123
a year to run a 5,000-student college

THE PROBLEM

A college runs on 8–10 disconnected tools. The exam cycle is where the pain concentrates: faculty hand-build a paper for every subject, then mark scripts over weekends.

Compliance is archaeology — NAAC, the university and the state portal each demand evidence colleges rebuild from registers weeks later.

Students get nothing back: no app, no placements, no visibility into their own data.

HOW WE GET IN

In through the exam paper — the most repeated task in the college, and the only door that hands us their questions, results and learners at once.

Then the whole semester — attendance, timetable, curriculum, fees, library, payroll.

Then the learning — 4 certificate programmes already authored, delivered in the same app students open daily for results.

WHAT IS BUILT — TODAY

Academics: syllabus parsing, auto faculty-mapping, clash-safe auto-timetable, attendance.

Assessment: question bank, AI papers with an approval trail, secure online exams, AI and manual grading, transcripts.

Operations: fees, challans, online payments, library, inventory, procurement, payroll.

Learning: 4 certificate programmes (32 modules, 984 quiz items), placement prep, coding lab.

India-first: six languages with native-script AI output, UUCMS, BCU/KUD scheme packs.

WHY WE DIFFER

Legacy ERPs	Compliance paperwork. No AI, English-only, ₹300–1,200 per student plus implementation.
SIS + LMS	AI bolted on later; the college supplies its own content.
AI paper tools	A PDF for a teacher — no campus data, exams, grading or transcripts.
Vriddhi	The assessment engine joined to the system of record — content included.

Unit economics, measured: ₹22.45 L revenue per 5,000-student college at ₹449/student/year · ₹18,123 a year of cloud for that whole college · ₹23 of AI per student per year · 31–45 % gross margin, rising with every college added.

THE ASK — ₹50 L

indicative 8–10 %, CCPS or a convertible note with a 20 % discount and a valuation cap

USE OF FUNDS

Engineering — 1 full-stack	**₹18 L**	36 %
Implementation & pilot support — 1 person	**₹9 L**	18 %
Content & instructional design	**₹8 L**	16 %
Sales, travel & demo setup	**₹5 L**	10 %
Contingency	**₹4 L**	8 %
Cloud, AI & tooling	**₹3 L**	6 %
Legal, GST, DPDP & audit	**₹3 L**	6 %

WHAT IT BUYS

Month 3
5 paid pilots signed · fee gateway and alerts live

Month 6
10 colleges live · parent portal and NAAC pack shipped

Month 9
₹25–35 L ARR · 8 certificate programmes · seed-ready

Non-cash asks: three warm introductions to college principals · one reference logo willing to be named · one university contact for a scheme-pack co-seed.

Stated plainly: the product is complete and audited (clean type-check, ~1,540 tests, 1,827 lines of security rules, costing and health audits on file) and we are pre-revenue. The next 90 days convert interest into 3–5 paid pilots — that is what this round buys.
