INVESTOR DECK · 2026

VRIDDHI
INSTITUTIONS

The AI-native academic operating system for Indian colleges

AI question papers · secure online exams · auto-grading · fees · attendance · results · six Indian languages · UUCMS-ready

Growth through knowledge · Built in Karnataka · <your name> · <email> · <phone>

THE OPPORTUNITY

48,000 colleges are buying software this decade

And they are already paying for far less than what we ship.

48,246
colleges + 1,289 universities in India

4.50 Cr
students enrolled; GER 30 % and rising

₹300–1,200
already spent per student, per year, on ERP licences

$4.48 B
India online education in 2026 → $23.9 B by 2034

- NEP 2020 and NAAC turned digital evidence into a procurement requirement, not a preference.
- State portals (Karnataka's UUCMS) are mandatory for every student — and no mainstream ERP is built around them.
- Incumbent ERPs are 10–20 years old: no AI, English-only, 3–9 month deployments, per-student licences.

THE PROBLEM

A college runs on 9 disconnected tools — and one weekend-eating ritual

Fragmented records

Attendance, fees, timetables and results live in separate spreadsheets. Every semester ends with manual re-entry and no single source of truth.

The exam-paper bottleneck

Faculty hand-build a paper for every subject, every semester — then spend weekends marking scripts. Paper-making, not teaching, consumes the cycle.

Compliance by archaeology

NAAC, the university and the state portal each demand evidence. Colleges reconstruct it from registers weeks after the fact.

Students get nothing back

No app, no placements, no visibility. The institution's own data never reaches the learner who generated it.

THE WEDGE

We get in through the exam paper, then own the semester

Why this door opens first

- It is the most painful, most visible, most repeated task in the college — and nobody sells a complete answer to it.
- It produces an artefact the principal can hold: a print-ready paper in the university's format, with an approval trail.
- The question bank built here becomes the cold-start for attendance analytics, objective exams and grading.
- Faculty adopt it because the AI drafts and they decide — nothing is published without a human approval.

Land → expand → monetise

Land

Exam cycle: question bank, AI papers, online tests, auto-grading.

Expand

Attendance, timetable, curriculum, fees, library, payroll, analytics.

Monetise

Certificate programmes and placement prep sold to the same installed base.

WHAT IS BUILT

Seven role portals. One product. Shipped.

Not a prototype, not a mock-up — verified in the repository at commit 091c6d5.

7
role portals: student, faculty, HOD, admin, office, superadmin, employee

160
backend functions (144 callable · 6 HTTP · 10 scheduled)

257K
lines of TypeScript · 1,827 lines of security rules

1,540+
automated tests green · 382 render-mount checks

- Academics: curriculum, syllabus parsing, auto faculty-mapping, clash-safe auto-timetable, attendance.
- Assessment: question bank, AI paper generation, secure online exams, AI + manual grading, transcripts.
- College operations: fees, challans, payments, library, inventory, procurement, payroll, no-dues.
- Learning: 4 certificate programmes, placement prep, coding lab, ATS resume builder.

THE CORE

One assessment loop, closed — with a human on every decision

1 · Bank

Curated + imported + AI-generated questions, tagged by topic and difficulty.

2 · Paper

Blueprint by unit, marks and difficulty. AI drafts; faculty approve.

3 · Exam

Online test with lockdown, section breaks, autosave and expiry recovery.

4 · Grade

MCQ auto-grade; AI grading suggestions with confidence scores and rubrics.

5 · Record

Grade records → transcripts; university result files imported back in.

- No-AI fallback: a deterministic parser reads an uploaded DOCX/PDF paper with no API key at all.
- Multi-provider AI (Gemini / OpenAI / DeepSeek) behind one adapter, with tiers, daily caps, caching and per-college circuit breakers.
- Measured AI cost: ₹23 per student per year at base volume (₹46 budgeted with a 2× buffer).

INDIA-FIRST

Global software cannot be configured into an Indian college

Six languages, including AI output

Kannada, Tamil, Telugu, Malayalam, Hindi, English — the interface AND generated questions, options and explanations in native Unicode script.

UUCMS integration

Karnataka's mandatory state portal: candidate ID, USN capture, import matching, status sync and eligibility checks — the workflow every college performs by hand today.

Scheme packs as configuration

BCU SEP-2024 and KUD NEP-CBAE presets plus per-college custom packs: marks split, internal assessment, attendance slabs, pass rules and grade tables drive the whole system.

Exam office, university-shaped

Hall tickets with 75 % attendance blocking, room allotment, QR verification, result import for BCU-format files, marksheets and transcripts.

THE ELEARNING ENGINE

The learning business is already built

Institutions pay for software; learners pay for outcomes. We already have both in one product.

4

certificate programmes: GenAI · Digital Marketing · Project Management · HR Analytics

32/135

modules / lessons authored to a validated, version-controlled format

984

quiz items + projects, capstones, rubrics and facilitator guides

6

Indian languages the same engine delivers in

- Public shareable catalog for lead generation; students enrol inside the app they already open for attendance and results.
- Also shipped: server-side coding lab, previous-year-paper corpus (English + Kannada), placement prep studio, ATS resume builder.
- Certificate issuance, progress sync per college, offline caching and quiz generation all reuse the assessment engine.

WHY WE WIN

Where every other product stops

Capability	Legacy ERP	SIS + LMS	AI paper tool	Vriddhi
AI question-paper generation with approval trail	—	—	Yes	**Yes**
Reads an uploaded paper with no AI key (deterministic)	—	—	Partial	**Yes**
Secure online exam: lockdown, autosave, auto-submit	Partial	Partial	—	**Yes**
AI grading with confidence + rubric breakdown	—	—	—	**Yes**
Grade records → transcripts + university result import	Yes	Yes	—	**Yes**
Six Indian languages incl. native-script AI output	—	—	Partial	**Yes**
State portal (UUCMS) + scheme packs as configuration	—	—	—	**Yes**
Certificate programmes & placement prep included	—	Partial	—	**Yes**
Price per student per year	₹300–1,200	₹300–1,200	₹500/20 papers	**₹449 with content**

BUSINESS MODEL

Four revenue layers on one platform

L1 · Campus licence

₹449 per student per year + ₹2.5 L onboarding. All modules, unlimited users, AI included. A 5,000-student college = ₹22.45 L per year.

L2 · Add-on packs

₹40–120 per student per year each: Placement Pack (built), Coding Lab, Prep Studio, alerts, library automation, OBE/NAAC reporting.

L3 · Learning programmes

₹999–2,999 per learner for certificate programmes, or ₹150–400 per student bundled through the college. Content cost is fixed; delivery is near-zero marginal cost.

L4 · Platform & services

University dashboards, white-label delivery for content partners, corporate L&D and proctored hiring assessments: ₹5–25 L per year contracts.

UNIT ECONOMICS

A 5,000-student college costs ₹18,123 a year to run

Fully serverless, Mumbai region, no idle servers. Cost model reproducible from the repository.

₹22.45 L
revenue per 5,000-student college at ₹449/student/year

₹18,123
cloud infrastructure per year (₹27 K budgeted with buffer)

₹1.16 L
AI per year at base volume — ₹23 per student

31–45 %
gross margin with a shared team, and rising with every college added

- Margin is structural: colleges share one deployment and one fixed team cost; infrastructure is 0.08 % of revenue.
- Exam-day peaks are not a cost event: 1,000 simultaneous test starts ≈ ₹15 of usage, auto-scaled.
- Pricing floor measured, not guessed: ₹399 with a 3-year commitment, never below ₹349.

TRACTION — STATED HONESTLY

What is proven today, and what this round proves next

Proven and verifiable now

- Product complete end to end: ~1,540 tests green, tsc clean, 382 render checks, audited security rules.
- Content authored: 4 certificate programmes, ~2,000 curated MCQs, scheme packs, PYQ corpus, Kannada collateral.
- Cost model measured: ₹18 K/year infrastructure, ₹23/student/year AI, 31–45 % gross margin.
- Audits written and dated: health, costing, competitive analysis, demo playbook — the boring evidence of a profession.
- <colleges in pilot conversation> colleges in active conversation; <n> letters of intent signed.
- Raising ₹50 L to convert that interest into 5 paid pilots within 90 days.

Not yet — and this is the plan

Paying colleges

0 today → 5 paid pilots in 90 days → 25 colleges by month 18.

Learning revenue

0 today → marketplace + certificates in 90 days → 1,000 paid learners.

Procurement gaps

Live payment keys, WhatsApp/SMS alerts, parent portal, OBE/NAAC pack — Horizon 1.

Team

<n> full-time today → +2 engineering, +2 sales/implementation, +1 content with this round.

ROADMAP

Where the money goes, and what it buys

Horizon 1 · months 0–6 · funded by this round

Fee collection live · WhatsApp/SMS alerts · parent portal · marksheets & transcripts · OBE/NAAC pack. Unlocks: every procurement checklist.

Horizon 2 · months 6–12 · started on this bridge

Course marketplace · first Kannada programmes · corporate L&D · proctored assessment · placement pack v2. Unlocks: non-licence revenue at 85 %+ margin.

Horizon 3 · year 2–3 · seed round

University deployments · second-state portal depth · verifiable credentials · proctoring · Gulf/SAARC. Unlocks: one signature, 30–100 colleges.

THE ELEARNING OPPORTUNITY

A second business, sitting inside the first

Why the learning layer compounds

- India online education: $4.48 B in 2026 → $23.9 B by 2034 (23 % CAGR); higher education is the fastest-growing segment.
- India executive education and upskilling: $12.2 B with 22.7 M paid learners — and a 56.35 % employability rate demanding proof of skills.
- NEP 2020 lets colleges grant credit for external, outcome-mapped learning — a legislated reason to buy.
- Every edtech brand pays ₹1,500–4,000 to acquire a learner. Ours are already logged in, at zero media spend.

Three ways to monetise the same engine

Campus bundles

₹150–400 per student per programme — sold to a buyer already paying us.

Direct certification

₹999–2,999 per learner, CAC target ₹400–900, 50,000 students reachable in 25 colleges.

Corporate & government

₹1,500–6,000 per seat, or ₹5–25 L platform contracts, for proctored certification.

THE MOAT

Why this gets harder to displace every semester

Data gravity

Questions, attendance, grade records and transcripts accumulate inside the platform. Switching means losing the audit trail accreditors ask for.

Content library

4 programmes, ~2,000 curated MCQs, scheme packs and a PYQ corpus — 6–12 months of authored work that competitors must buy or build.

University configuration

Every scheme pack and portal integration turns the next college under that university into a 5-day onboarding, not a 5-week project.

AI cost engineering

Caching, tiers, caps and a deterministic fallback keep AI at ₹23/student/year — a price war we win against anyone who bolted AI on.

Serverless economics

₹18 K/year at 5,000 students, no on-premise, no idle servers — margin improves with every college.

Vernacular capability

Six languages, authored in-script. Shipped as Kannada decks, booklets and question papers, not as a locale dropdown.

TEAM

Who is building this

Today

- <Founder name> — <one line: what you did before, why you understand this problem>.
- <Co-founder / lead engineer> — <one line>.
- <Advisors: a principal, a university academic, a CA — anyone with standing>.
- Backed by an AI-assisted engineering process that produced 257 K lines with ~1,540 tests in <n> months.

Joining with this round

Engineering

2 full-stack engineers — Horizons 1 and 2 features.

Sales & implementation

2 people to run the pilot machine and onboard colleges (target: 5 colleges per quarter).

Content

1 instructional designer + subject experts on contract for 10 more programmes.

Advisory

A senior enterprise-SaaS mentor and a university-relations advisor.

THE ASK

₹50 L for 8–10 % — and three specific introductions

Pilot colleges

Warm introductions to principals and chairmen in Karnataka, then Maharashtra and Tamil Nadu. Three introductions are worth more than ₹10 L of marketing.

University relationships

A conversation with a university's academic or examination wing to co-seed question banks and scheme packs — one win onboards 30–100 affiliated colleges.

Operating help

A part-time enterprise-sales lead and a content partner for the certificate catalogue. Hiring is our real constraint, not capital.

- Use of funds: 36 % engineering · 18 % implementation & pilots · 16 % content · 10 % sales · 8 % contingency · 6 % cloud/AI · 6 % legal.
- 9-month milestones: 5 paid pilots by month 3 · 10 colleges live and ₹25–35 L ARR by month 9 · 8 certificate programmes · then the seed round.
- Governance we welcome: monthly metrics, a quarterly board review, and a named risk register reviewed every quarter.

WHY NOW

Four windows are open at the same time

This combination will not be open in 2028.

NEP + NAAC

Outcome evidence is now a funding condition, not a nicety

UUCMS

Every Karnataka student is already inside a state portal — and no ERP connects to it

AI economics

Frontier-quality generation in Indic scripts at ₹23 per student per year

ERP churn

Colleges are replacing 10-year-old ERPs, not buying their first one

- The question is not whether Indian colleges will run on AI-native software — it is which vendor is already inside them when they decide.
- Our answer is distribution-first: land through the exam paper, expand to the campus, then sell the learning.

VRIDDHI
INSTITUTIONS

Let's grow together.

Vriddhi (वृद्धि) — growth through knowledge.

Pilot onboarding for the first cohort of colleges starts in 30 days.

<your name> · <email> · <phone> · www.vriddhi.in
