

VRIDDHI
INSTITUTIONS

The academic operating system for Indian colleges

AI-powered question papers, online assessments and administration — in the languages India speaks.

Growing through knowledge

Vridhhi — Sanskrit for growth — is a full-featured, role-based academic management platform for colleges. Students, faculty, college administration and platform operators share one system covering attendance, assessments and tests, curriculum, question banks, AI-assisted paper generation, fees, timetables and analytics.

It is built on a modern React and Firebase stack, and designed for the realities of Indian higher education: six languages with native-script AI output, Karnataka's UUCMS portal, and university pass rules — out of the box.

IN THIS BOOKLET

- 07** The AI engine & languages
- 08** Built for Indian universities
- 09** Platform, security & getting started
- 10** Contact

The problem with running a college

Fragmented records

Attendance in one spreadsheet, fees in another, exams in registers. End-of-semester re-entry — and no single source of truth for anyone.

The exam bottleneck

A paper hand-built for every subject, every semester. Scripts marked over weekends. Paper-making, not teaching, eats the academic cycle.

English-only software

Mainstream ERPs and LMSs don't speak the language of the classroom — Kannada, Tamil, Telugu or Malayalam are an afterthought at best.

Compliance gaps

Karnataka's UUCMS portal, BCU pass rules and NEP scheme structures are handled by hand, not built in.

OUR VISION

Every Indian college — from a 300-student institution to a full university — runs its academics on one AI-powered platform, in the language of its classroom.

Everything academic, in one place

- **Attendance**

Marking and viewing, per subject and semester

- **Online tests & exams**

Schedule, publish, autosave, results

- **Question bank**

Manual, bulk import and AI-generated

- **AI paper generator**

Print, online and bank formats · PDF export

- **Curriculum & syllabus**

Upload, parse and topic mapping

- **Fees management**

Fee heads, records and the student portal

- **Timetables**

Generation, rescheduling, conflict detection

- **Results & transcripts**

Draft-to-publish pipeline

- **Analytics & View 360**

Student insights and college comparison

- **Library**

Catalogue and issue tracking

- **Assignments & materials**

Create, submit, grade, download

- **Appointments & events**

Student-faculty meetups, calendar

Everything works together — data flows from attendance to analytics without re-keying.

Teach, test and grade — with hours returned

- **Mark attendance**

Per subject and class, with student and department views for follow-up.

- **Build the question bank**

Manually, by CSV / Excel bulk import, or with AI-generated questions.

- **Generate exam papers**

From your bank, in print, online and bank formats — exported to print-ready PDF.

- **Auto-grade with confidence**

Rubric-based scoring of descriptive answers, with confidence scores. Review one pass, publish marks.

- **Run the timetable**

Reschedule classes and tests; conflict detection protects the plan before it breaks.

- **Stay connected**

Appointments, assignments, materials and announcements in one place.

Less paper-making. Less script-marking. More teaching.

One dashboard for the whole semester

- **See your semester**

Attendance, timetable, announcements and progress on a single screen.

- **Take tests, safely**

Online exams with clear instructions, autosave and expiry recovery.

- **Track fees**

The student fee portal shows dues and payment records — no queues, no paper.

- **Study support**

Library, course materials, question banks and step-by-step solutions.

- **Results when they land**

Grades, SGPA and transcripts the moment they are published.

- **Your language**

Switch the interface to Kannada, Tamil, Telugu, Malayalam, Hindi or English.

Parents are next — the parent role is on the roadmap.

AI that drafts, faculty that decide

AI questions

Options, marks and step-by-step explanations — generated in the language you choose.

AI papers

Assembled from your question bank with templates and topic rules. Export to PDF.

AI grading

Rubric scores with confidence levels. A human review before anything is published.

Runs on Gemini · OpenAI · DeepSeek — selectable at runtime, with automatic fallbacks.

SIX LANGUAGES

- Kannada

- Tamil

- Telugu

- Malayalam

- Hindi

- English

Questions, options and explanations are generated in native Unicode scripts — the AI writes in the language you pick, and the interface follows suit.

Built for Karnataka, ready for Indian universities

- **UUCMS integration**

Import Candidate IDs and USNs from the state portal. Students are auto-linked by email, and admins track sync status on a dedicated dashboard.

- **University pass rules**

BCU under-graduate pass logic — UE threshold plus aggregate — is applied automatically when results are imported.

- **NEP & scheme ready**

Curriculum upload, syllabus parsing and credit-structure mapping for modern schemes keep records audit-ready.

- **Results pipeline**

CSV / Excel imports land as grades and SGPA, then move through the draft-to-publish flow for official transcripts.

Extendable to any university — schemes, pass rules and portals are configured, not coded.

Serious infrastructure, simple to use

Multi-tenant SaaS

Per-college data isolation, superadmin operations, subscription billing and a system health monitor.

Modern stack

React 18 + TypeScript, Firebase Auth & Firestore, Express Cloud Functions, Zod validation, rate limiting.

Security first

Role-based access, hardened Firestore rules, auth audits, audit trails and optimistic-concurrency writes.

Built for campus

Responsive web that works on college Wi-Fi or mobile data — a PWA experience is next.

GETTING STARTED

- 1 Book a walkthrough of your role's dashboard.
- 2 Onboard your college — bulk import of students and faculty.
- 3 Seed the question bank — CSV, Excel or AI generation.
- 4 Go live — your first AI-generated paper in under a week.

Let's grow together.
